

CSD – Statistical Compendium

DEMOGRAPHIC AND HEALTH STATUS IN TELANGANA AT A GLANCE

Evidence from National Family Health Surveys

Prepared for
Planning Department
Government of Telangana

By
Mohammad Sajid

COUNCIL FOR SOCIAL DEVELOPMENT

(A research institute supported by Indian Council of Social Science Research,
Government of Telangana & Reserve Bank of India)
Southern Regional Centre, Hyderabad

Foreword

Council for Social Development (CSD) was established in 1962 by Dr. Durgabai Deshmukh, and the Southern Regional Centre was established in Hyderabad in 1970. CSD, Hyderabad engages in policy-oriented research with a special focus on social aspects of development planning and concern for social justice and equity that continues to guide the work of CSD. We are an institute funded by the Indian Council of Social Science Research, the Government of Telangana and the Reserve Bank of India. The present study is undertaken by my colleague Mr. Mohammad Sajid which profiles the demographic and health status in Telangana state.

The state of Telangana was formed on June 2, 2014, and is the youngest state in the Union of India. The map of Telangana as a separate political, administrative and legal entity might be new, but it has a distinct socio-cultural and historical context. Developmental concerns of Telangana, especially in building a healthy and safe population, is a major one. This requires careful policymaking and decisions, and in this regard, it is important to have robust socio-economic and health data to understand the ground realities, issues and challenges. With this in view, this document presents the demographic and health status in Telangana based on two rounds of the National Family Health Survey conducted after the formation of the state – NFHS-4 (2015-16) and NFHS-5 (2019-20).

We are grateful to the Planning Department, Government of Telangana for their financial support and encouragement, without which such research activities of CSD would not have been possible. The idea of preparing such documents for strengthening the database for the newly formed state has been the brainchild of Mr. Shaik Meera, Director, Department of Planning, Government of Telangana. It is in this context that we present this document as a first step towards bringing out data-based volumes of this kind.

Acknowledgements

It has been a great pleasure to undertake this work that documents the demographic and health status in the state of Telangana based on the information from National Family Health Surveys. I profusely thank Prof. Sujit Kumar Mishra, Regional Director (In-charge), CSD, Hyderabad, for entrusting me with this responsibility. I am also thankful to the Planning Department for conducting the workshop on data analysis, visualisation and communication (of which I was a participant), which immensely helped me in the preparation of this document. I am deeply indebted to Mr. Lingaraja Sahu, Senior Program Manager II, Uber India Research and Development Private Limited for his help in preparing the maps presented in the document. I am also grateful to Mr. Ravi Siriki, Consultant, Department of Planning, Government of Telangana for his meticulous comments and suggestions on an earlier draft of this report which helped fine tune this document. Mr. Kiran Sikha has beautifully designed this document and I owe a debt of gratitude to him for his patience. I am particularly thankful to the editorial assistance I have received from Mr. D. Sunder Raj, Ms. K. Mahalakshmi, Ms. Kalpana Kolli, Ms. J. Amrutha, Ms. A. Shameena and Mr. D. Sammaiah, during the preparation of this work. I also thank Mr. Prasad, Mr. P. Kumar, Mr. Vijaykumar, Ms. Prasanna and Mr. P. Mariya Das for all their timely help and encouragement in the completion of this work. I am also thankful to my other colleagues at CSD – Dr. Soumya Vinayan, Dr. D. Siva Kumar, Mr. Anudeep Gujjeti, Dr. Deepthi Krishna T, Dr. Ramshin Rahman, Dr. Md. Wasim Akhtar, Dr. Pullanna Vidyapogu and Dr. Raj Kumar Kattula for their camaraderie, which has been a great source of inspiration in the wilderness of research.

Mohammad Sajid
Research Associate
CSD-SRC, Hyderabad

Introduction

The National Family Health Survey involves multiple rounds of surveys covering representative sample households across India. The surveys provide data on population, health and nutrition. The nodal agency responsible for the coordination and technical guidance for the survey is the International Institute of Population Sciences (IIPS), Mumbai, designated for this task by the Ministry of Health and Family Welfare, Government of India. There have been several rounds of the survey undertaken since 1992-93. The other rounds of the survey include: NFHS-2 (1998-99), NFHS-3 (2005-06), NFHS-4 (2015-16). The data is available for the state of Telangana at two points of time (NFHS-4 and 5), and the present document makes use of this available information. The data on demographic and health indicators are compared and presented for the state between these two rounds. It may be noted that the comparison is not provided for indicators that were not covered under NFHS-4.

The broad categories of indicators which are depicted include: population and household profile; characteristics of adults; marriage and fertility; current use of family planning methods, unmet needs of family planning and quality of family planning services; maternal and child health – Maternal care (for the last birth five years before the survey), delivery care (for births in the last five years before the survey), child vaccination and vitamin A supplementation and treatment of childhood diseases; child feeding practices and nutritional status of children; nutritional status among adults; anaemia among children and adults; blood sugar levels among adults; hypertension among adults; screening for cancer among adults and tobacco use and alcohol consumption among adults (please see the table in the next two pages for more details). In this document, we present the district wise performance of these indicators under NFHS-5 in the state of Telangana; and provide a state level comparison of these indicators with that of NFHS-4, wherever available. It should be noted that only 99 indicators under the broad categories are available at the district level compared to 131 indicators available at the state level. Thus, only those available indicators at the district level are depicted in the document.

These indicators are depicted in three forms: map, graph and table. The map depicts the top three and least three districts for the indicator. The graph represents the state level status of the indicators across both the NFHS-4 (2015-2016) and NFHS-5 (2019-2020) performance. This presents the states' overall picture at the time of the formation compared to the present status. The table presents the status of districts in the Telangana state. This document will serve as a ready-reckoner for policymakers, academicians and researchers, which will, in turn, provide inputs for framing effective policy interventions. The definition of the indicators as defined in NFHS is provided in the following section for all the indicators analysed in the document.

Indicators

Population and Household Profile		Status	Page No.
1	Female population age 6 years and above who ever attended school	#	3
2	Population below age 15 years	#	4
3	Sex ratio of the total population (females per 1,000 males)	#	5
4	Sex ratio at birth for children born in the last five years (females per 1,000 males)	#	6
5	Children under age 5 years whose birth was registered with the civil authority	#	7
6	Deaths in the last 3 years registered with the civil authority	#	8
7	Population living in households with electricity	#	9
8	Population living in households with an improved drinking-water source	#	10
9	Population living in households that use an improved sanitation facility	#	11
10	Households using clean fuel for cooking	#	12
11	Households using iodized salt	#	13
12	Households with any usual member covered under a health insurance/financing scheme	#	14
13	Children age 5 years who attended pre-primary school during the school year 2019-20	#	15
Characteristics of Women (age 15-49 years)			
14	Women who are literate	#	19
15	Women with 10 or more years of schooling	#	20
Marriage and Fertility			
16	Women age 20-24 years married before age 18 years	##	23
17	Women age 15-19 years who were already mothers or pregnant at the time of the survey	##	24
18	Women age 15-24 years who use hygienic methods of protection during their menstrual period	#	25
Current Use of Family Planning Methods (currently married women age 15-49 years)			
19	Any method	#	29
20	Any modern method	#	30
21	Female sterilization	#	31
22	Male sterilization	#	32
23	IUD/PPIUD	#	33
24	Pill	#	34
25	Condom	#	35
26	Injectables	#	36
Unmet Need for Family Planning (currently married women age 15-49 years)			
27	Total unmet need	##	39
28	Unmet need for spacing	##	40

Quality of Family Planning Services			
29	Health worker ever talked to female non-users about family planning	#	43
30	Current users ever told about side effects of current method	#	44
Maternal and Child Health		Status	Page No.
Maternity Care (for last birth in the 5 years before the survey)			
31	Mothers who had an antenatal check-up in the first trimester	#	49
32	Mothers who had at least 4 antenatal care visits	#	50
33	Mothers whose last birth was protected against neonatal tetanus	#	51
34	Mothers who consumed iron folic acid for 100 days or more when they were pregnant	#	52
35	Mothers who consumed iron folic acid for 180 days or more when they were pregnant	#	53
36	Registered pregnancies for which the mother received a Mother and Child Protection (MCP) card	#	54
37	Mothers who received postnatal care from a doctor/nurse/LHV/ANM/midwife/other health personnel within 2 days of delivery	#	55
38	Average out-of-pocket expenditure per delivery in a public health facility (Rs.)	##	56
39	Children who received postnatal care from a doctor/nurse/LHV/ANM/midwife/other health personnel within 2 days of delivery	#	57
Delivery Care (for births in the 5 years before the survey)			
40	Institutional births	#	61
41	Institutional births in public facility	#	62
42	Home births that were conducted by skilled health personnel	#	63
43	Births attended by skilled health personnel	#	64
44	Births delivered by caesarean section	##	65
45	Births in a private health facility that were delivered by caesarean section	##	66
46	Births in a public health facility that were delivered by caesarean section	##	67
Child Vaccinations and Vitamin A Supplementation			
47	Children age 12-23 months fully vaccinated based on information from either vaccination card or mother's recall	#	71
48	Children age 12-23 months fully vaccinated based on information from vaccination card only	#	72
49	Children age 12-23 months who have received BCG	#	73
50	Children age 12-23 months who have received 3 doses of polio vaccine	#	74
51	Children age 12-23 months who have received 3 doses of penta or DPT vaccine	#	75
52	Children age 12-23 months who have received the first dose of Measles-Containing Vaccine (MCV)	#	76
53	Children age 24-35 months who have received a second dose of Measles-Containing Vaccine (MCV)	#	77
54	Children age 12-23 months who have received 3 doses of rotavirus vaccine	#	78
55	Children age 12-23 months who have received 3 doses of penta or hepatitis B vaccine	#	79
56	Children age 9-35 months who received a vitamin A dose in the last 6 months	#	80
57	Children age 12-23 months who received most of their vaccinations in a public health facility	#	81

Treatment of Childhood Diseases (children under age 5 years)		Status	Page No.
58	Prevalence of diarrhoea in the 2 weeks preceding the survey	##	85
59	Children with diarrhoea in the 2 weeks preceding the survey who received Oral Rehydration Salts (ORS)	#	86
60	Children with diarrhoea in the 2 weeks preceding the survey who received zinc	#	86
61	Children with diarrhoea in the 2 weeks preceding the survey taken to a health facility or health provider	#	86
62	Prevalence of symptoms of Acute Respiratory Infection (ARI) in the 2 weeks preceding the survey	##	87
63	Children with fever or symptoms of ARI in the 2 weeks preceding the survey taken to a health facility or health provider	#	88
Child Feeding Practices and Nutritional Status of Children			
64	Children under age 3 years breastfed within one hour of birth	#	91
65	Children under age 6 months exclusively breastfed	#	92
66	Breastfeeding children age 6-23 months receiving an adequate diet	#	93
67	Total children age 6-23 months receiving an adequate diet	#	94
68	Children under 5 years who are stunted (height-for-age)	##	95
69	Children under 5 years who are wasted (weight-for-height)	##	96
70	Children under 5 years who are severely wasted (weight-for-height)	##	97
71	Children under 5 years who are underweight (weight-for-age)	##	98
72	Children under 5 years who are overweight (weight-for-height)	##	99
Nutritional Status of Women (age 15-49 years)			
73	Women whose Body Mass Index (BMI) is below normal (BMI <18.5 kg/m ²)	##	103
74	Women who are overweight or obese (BMI ≥25.0 kg/m ²)	##	104
75	Women who have high risk waist-to-hip ratio (≥0.85)	##	105
Anaemia among Children and Women			
76	Children age 6-59 months who are anaemic (<11.0 g/dl)	##	109
77	Non-pregnant women age 15-49 years who are anaemic (<12.0 g/dl)	##	110
78	Pregnant women age 15-49 years who are anaemic (<11.0 g/dl)	##	111
79	All women age 15-49 years who are anaemic	##	112
80	All women age 15-19 years who are anaemic	##	113
Blood Sugar Level among Adults (age 15 years and above)			
Women			
81	Blood sugar level – High (141-160 mg/dl)	##	119
82	Blood sugar level – Very high (>160 mg/dl)	##	120
83	Blood sugar level – High or very high (>140 mg/dl) or taking medicine to control blood sugar level	##	121
Men			
84	Blood sugar level – High (141-160 mg/dl)	##	125
85	Blood sugar level – Very high (>160 mg/dl)	##	126
86	Blood sugar level – High or very high (>140 mg/dl) or taking medicine to control blood sugar level	##	127

Indicators

Hypertension among Adults (age 15 years and above)		Status	Page No.
Women			
87	Mildly elevated blood pressure (Systolic 140-159 mm of Hg and/or Diastolic 90-99 mm of Hg)	##	133
88	Moderately or severely elevated blood pressure (Systolic ≥ 160 mm of Hg and/or Diastolic ≥ 100 mm of Hg)	##	134
89	Elevated blood pressure (Systolic ≥ 140 mm of Hg and/or Diastolic ≥ 90 mm of Hg) or taking medicine to control blood pressure	##	135
Men			
90	Mildly elevated blood pressure (Systolic 140-159 mm of Hg and/or Diastolic 90-99 mm of Hg)	##	139
91	Moderately or severely elevated blood pressure (Systolic ≥ 160 mm of Hg and/or Diastolic ≥ 100 mm of Hg)	##	140
92	Elevated blood pressure (Systolic ≥ 140 mm of Hg and/or Diastolic ≥ 90 mm of Hg) or taking medicine to control blood pressure	##	141
Screening for Cancer among Women (age 30-49 years)			
93	Ever undergone a screening test for cervical cancer	#	145
94	Ever undergone a breast examination for breast cancer	#	146
95	Ever undergone an oral cavity examination for oral cancer	#	147
Tobacco Use and Alcohol Consumption among Adults (age 15 years and above)			
96	Women age 15 years and above who use any kind of tobacco	##	151
97	Men age 15 years and above who use any kind of tobacco	##	152
98	Women age 15 years and above who consume alcohol	##	153
99	Men age 15 years and above who consume alcohol	##	154

Status:

Denotes higher the value of the indicator, higher the rank; lower the value of the indicator, lower the rank.

Denotes lower the value of the indicator, higher the rank; higher the value of the indicator, lower the rank.

Definition of the Indicators

Population and Household Profile

Population living in households with an improved drinking-water source

Piped water into dwelling/yard/plot, piped to a neighbour, public tap/standpipe, tubewell or borehole, protected dug well, protected spring, rainwater, tanker truck, cart with small tank, bottled water, community RO plant.

Population living in households that use an improved sanitation facility

Flush to a piped sewer system, flush to a septic tank, flush to pit latrine, flush to don't know where, ventilated improved pit (VIP)/biogas latrine, pit latrine with slab, twin pit/composting toilet, which is not shared with any other household. This indicator does not denote access to the toilet facility completely.

Households using clean fuel for cooking

Electricity, LPG/natural gas, biogas.

Characteristics of Women (age 15-49 years)

Women who are literate

Refers to women who completed standard 9 or higher and women who can read a whole sentence or part of a sentence.

Marriage and Fertility

Women age 15-24 years who use hygienic methods of protection during menstrual period

Locally prepared napkins, sanitary napkins, tampons and menstrual cups are considered to be hygienic methods of protection.

Current Use of Family Planning Methods (currently married women age 15-49 years)

Any method/Any modern method

Any method includes other methods that are not shown separately; any modern method includes other modern methods that are not shown separately.

Unmet Need for Family Planning (currently married women age 15-49 years)

Total unmet need /Unmet need for spacing

Unmet need for family planning refers to fecund women who are not using contraception but who wish to postpone the next birth (spacing) or stop childbearing altogether (limiting). Specifically, women are considered to have an unmet need for spacing if they are:

- At risk of becoming pregnant, not using contraception, and either do not want to become pregnant within the next two years, or are unsure if or when they want to become pregnant.
- Pregnant with a mistimed pregnancy.
- Postpartum amenorrhoeic for up to two years following a mistimed birth and not using contraception.
- Women are considered to have unmet need for limiting if they are:
- At risk of becoming pregnant, not using contraception, and want no (more) children.
- Pregnant with an unwanted pregnancy.
- Postpartum amenorrhoeic for up to two years following an unwanted birth and not using contraception.
- Women who are classified as infecund have no unmet need because they are not at risk of becoming pregnant.

Unmet need for family planning is the sum of Unmet need for spacing plus unmet need for limiting.

Quality of Family Planning Services

Current users ever told about side effects of current method- Based on current users of female sterilisation, IUD/PPIUD, injectables, and pills who started using that method in the past 5 years.

Maternal and Child Health

Maternity Care (for last birth in the 5 years before the survey)

Mothers whose last birth was protected against neonatal tetanus

Includes mothers with two injections during the pregnancy for their last birth, or two or more injections (the last within 3 years of the last live birth), or three or more injections (the last within 5 years of the last birth), or four or more injections (the last within 10 years of the last live birth), or five or more injections at any time prior to the last birth.

Delivery Care (for births in the 5 years before the survey)

Home births that were conducted by skilled health personnel/Births attended by skilled health personnel

Doctor/nurse/LHV/ANM/midwife/other health personnel.

Child Vaccinations and Vitamin A Supplementation

Children age 12-23 months fully vaccinated based on information from either vaccination card or mother's recall

Vaccinated with BCG, measles-containing vaccine (MCV)/MR/MMR/Measles, and 3 doses each of polio (excluding polio vaccine given at birth) and DPT or penta vaccine.

Children age 12-23 months fully vaccinated based on information from Vaccination card only

Among children whose vaccination card was shown to the interviewer, percentage vaccinated with BCG, measles-containing vaccine (MCV)/MR/MMR/Measles, and 3 doses each of polio (excluding polio vaccine given at birth) and DPT or penta vaccine.

Children age 12-23 months who have received 3 doses of polio vaccine

Not including polio vaccination given at birth.

Children age 12-23 months who have received 3 doses of rotavirus vaccine

Since rotavirus is not being provided across all states and districts, the levels should not be compared.

Child Feeding Practices and Nutritional Status of Children

Children under age 3 years breastfed within one hour of birth

Based on the last child born in the 3 years before the survey.

Children under age 6 months exclusively breastfed

Based on the youngest child living with the mother.

Children age 6-8 months receiving solid or semi-solid food and breastmilk

Based on the youngest child living with the mother.

Breastfeeding children age 6-23 months receiving an adequate diet

Based on the youngest child living with the mother.

Breastfed children receiving 4 or more food groups and a minimum meal frequency, non breastfed children fed with a minimum of 3 Infant and Young Child Feeding Practices (fed with other milk or milk products at least twice a day, a minimum meal frequency that is, receiving solid or semi-solid food at least twice a day for breastfed infants 6-8 months and at least three times a day for breastfed children 9-23 months, and solid or semi-solid foods from at least four food groups not including the milk or milk products food group).

Non-breastfeeding children age 6-23 months receiving an adequate diet

Based on the youngest child living with the mother

Breastfed children receiving 4 or more food groups and a minimum meal frequency, non-breastfed children fed with a minimum of 3 Infant and Young Child Feeding Practices (fed with other milk or milk products at least twice a day, a minimum meal frequency that is, receiving solid or semi-solid food at least twice a day for breastfed infants 6-8 months and at least

Definition of the Indicators

three times a day for breastfed children 9-23 months, and solid or semi-solid foods from at least four food groups not including the milk or milk products food group).

Total children age 6-23 months receiving an adequate diet

Based on the youngest with the mother.

Breastfed children receiving 4 or more food groups and a minimum meal frequency, non-breastfed children fed with a minimum of 3 Infant and Young Child Feeding Practices (fed with other milk or milk products at least twice a day, a minimum meal frequency that is, receiving solid or semi-solid food at least twice a day for breastfed infants 6-8 months and at least three times a day for breastfed children 9-23 months, and solid or semi-solid foods from at least four food groups not including the milk or milk products food group).

Children under 5 years who are stunted (height-for-age)

Below -2 standard deviations, based on the WHO standard.

Children under 5 years who are wasted (weight-for-height)

Below -2 standard deviations, based on the WHO standard.

Children under 5 years who are severely wasted (weight-for-height)

Below -3 standard deviations, based on the WHO standard.

Children under 5 years who are underweight (weight-for-age)

Below -2 standard deviations, based on the WHO standard.

Children under 5 years who are overweight (weight-for-height)

Above +2 standard deviations, based on the WHO standard.

Nutritional Status of Women (age 15-49 years)

Women whose Body Mass Index (BMI) is below normal (BMI <18.5 kg/m²)

Excludes pregnant women and women with a birth in the preceding 2 months

Women who are overweight or obese (BMI ≥25.0 kg/m²)

Excludes pregnant women and women with a birth in the preceding 2 months

Anaemia among Children and Women

Children age 6-59 months who are anaemic (<11.0 g/dl)

Haemoglobin in grams per decilitre (g/dl). Among children, prevalence is adjusted for altitude. Among women, prevalence is adjusted for altitude and for smoking status, if known. As NFHS uses the capillary blood for estimation of anaemia, the results of NFHS-5 need not be compared with other surveys using venous blood.

Non-pregnant women age 15-49 years who are anaemic (<12.0 g/dl)

Haemoglobin in grams per decilitre (g/dl). Among children, prevalence is adjusted for altitude. Among women, prevalence is adjusted for altitude and for smoking status, if known. As NFHS uses the capillary blood for estimation of anaemia, the results of NFHS-5 need not be compared with other surveys using venous blood.

Pregnant women age 15-49 years who are anaemic (<11.0 g/dl)

Haemoglobin in grams per decilitre (g/dl). Among children, prevalence is adjusted for altitude. Among women, prevalence is adjusted for altitude and for smoking status, if known. As NFHS uses the capillary blood for estimation of anaemia, the results of NFHS-5 need not be compared with other surveys using venous blood.

All women age 15-49 years who are anaemic

Haemoglobin in grams per decilitre (g/dl). Among children, prevalence is adjusted for altitude. Among women, prevalence is adjusted for altitude and for smoking status, if known. As NFHS uses the capillary blood for estimation of anaemia, the results of NFHS-5 need not be compared with other surveys using venous blood.

Definition of the Indicators

All women age 15-19 years who are anaemic

Haemoglobin in grams per decilitre (g/dl). Among children, prevalence is adjusted for altitude. Among women, prevalence is adjusted for altitude and for smoking status, if known. As NFHS uses the capillary blood for estimation of anaemia, the results of NFHS-5 need not be compared with other surveys using venous blood.

Blood Sugar Level among Adults (age 15 years and above)

Women

Blood sugar level - High (141-160 mg/dl)

Random blood sugar measurement

Blood sugar level - Very high (>160 mg/dl)

Random blood sugar measurement

Blood sugar level - High or very high (>140 mg/dl) or taking medicine to control blood sugar level

Men

Blood sugar level - High (141-160 mg/dl)

Random blood sugar measurement

Blood sugar level - Very high (>160 mg/dl)

Random blood sugar measurement

Blood sugar level - High or very high (>140 mg/dl) or taking medicine to control blood sugar level

Random blood sugar measurement

Notes:

LHV = Lady Health Visitor, ANM = Auxiliary Nurse Midwife

* Percentage not shown; based on fewer than 25 unweighted cases

() Based on 25-49 unweighted cases

Kumuram Bheem Asifabad is shown as Komaram Bheem Asifabad in the map since it is inbuilt in the software.

Screening for different types of cancer among women are considered as a positive indicator since it reflects levels of awareness among women.

Way Forward

As mentioned in the foreword and introduction to this document, this exercise is based on the state and district level Fact Sheet released by International Institute for Population Sciences (IIPS) based on NFHS-5 (2019-20) and NFHS-4 (2015-16), wherever applicable. The unit level data under NFHS-4 is already available and for the latest round might be available in the month of May 2022. Given the availability of unit level data for both the rounds, we envisage to understand the status of these indicators at state and district levels across attributes. The socio-economic attributes such as gender (male, female), social categories (SC/ST/OBC/GEN), location (rural/urban), the economic status based on occupation and level of education, to mention a few, can be disaggregated for each of the indicators depicted in this compendium. At CSD, we envisage to bring out monthly bulletins on each of these indicators based on the attributes mentioned above. For instance, we have high incidence of caesarean deliveries in private health facilities in Telangana. It will be interesting to locate the rural/urban, occupational and social category attributes of this incidence and delineate the differences. Such exercises would be of immense help for policy and decision making and to plan appropriate interventions at the government level.
